The MP-32™ iron with Cut Muscle™ design technology, winner of the "Editors' Choice" award in Golf Digest's 2005 Hot List and the "Testers' Top Pick" in GOLF Magazine Club Test 2005, is the player's club for the modern game of golf. Through intensive research, the Mizuno Design team evaluated the evolution of the game of golf and, in turn, created the new MP-32™ iron to maximize performance for today's more aggressive game. Utilizing our patented Grain Flow Forging® technology and the breakthrough Cut Muscle™ design, Mizuno engineers were able to strategically redistribute weight to create a consistent sweet spot location, with a deeper center of gravity, while extremely controllable and predictable ball flight, producing a mid-high trajectory in long irons and a mid trajectory in the scoring irons. Forged Grain Flow Iron (Mizuno's Patented Grain Flow Forging® process enhances the flow and tightness of the grains in the metal, maximizing the strength of the clubhead without sacrificing the soft feel, and ensuring greater consistency from club to club and set to set.) with Cut Muscle Technology, newest addition to a long lasting players line of irons.
